

I am a High School graduate of C.V.Bethel Senior High and formerly a part of the Magnet Marine Science Program. When I am not in school I enjoy reading, S.C.U.B.A. Diving, swimming, snorkeling, and playing chess. Over the last few years I have managed to obtain a Basic Swimming Certification, Basic Open Water Diver Scuba Certification, and a CPR & First Aid Certification.

I have also had a number of chances to work with B.R.E.E.F. and have gained an appreciation for what they are trying to achieve in their pursuit to change the mindset of Bahamians to preserve our environment and natural resources.

I feel the only way to create change is by changing the mindset of Bahamians, in addition I feel passionate about the affects of global warming on our planet and conveying the benefits of using alternative sources of energy that are readily available for Bahamians.

After my six-month internship at B.R.E.E.F., I plan to attend the Island School in Cape Eleuthera through The Bahamas Environmental Steward Scholars Program to further my studies in the marine science field. Later, I plan to attend the College of the Bahamas to obtain a Bachelor's Degree in Biochemistry and then attend Nova Southeastern University or the University of the West Indies in the hopes of receiving my Master's Degree in Marine Biology.
